

After Processing

Label each product and know where it is, at all times

Today, food safety and traceability are essential to the egg processing industry. Ovotrack offers a modular traceability and information solution, which can be implemented in full or in stages. Our system not only supports compliance with increasingly stringent legislation and customer demands, but also allows you to boost productivity, reduce errors and cut costs.

An integrated report designer offers a range of options to present information to management, customers, auditors and other users.

Ovotrack offers separate solutions for each stage of the egg processing process:

- Before Processing
- During Processing
- After Processing

Ovotrack offers a modular traceability and information solution for all variations of egg processing, such as breaking, pasteurizing, drying, boiling or coloring eggs.

Ovotrack. Knows where your egg goes.

Ovotrack End of Lane

To label finished products with a unique ID, Ovotrack End of Lane uses an Ovotrack PC with label printers. By selecting a sales orders or products with predefined label layouts and the production batch that is used to create the finished products, labels are set up to comply with customer requirements. For tanks or palecons, scales can be connected so that the accurate weight is printed on the label. In case of higher volumes of bag-in-box products, labels can be printed and applied automatically with automatic print & apply systems.

Ovotrack Palletizing

With wireless scanners used in the dispatch department, pallet labels can be created at any stage of the process. Either during palletizing, whilst preparing a shipment or during loading products, all unique ID's from products on one pallet can be scanned and connected to a pallet label with a unique PAL number. The pallet label can be applied manually or automatically with the help of Print & Apply.

Ovotrack Dispatch

An Ovotrack PC with one or more wireless scanners and printers can be installed at the dispatch department to support dispatch and maintain traceability. The system verifies whether the correct product has been scanned and checks the best before date. After connecting egg products to sales orders at dispatch, a delivery note or bill of lading can be generated and the data can be forwarded to the ERP system in the office for invoicing.

Other relevant modules

Ovotrack Print & Apply

When packing is automated, Ovotrack Print & Apply offers fully automatic and real-time labelling of finished products on a case conveyor. Ovotrack Print & Apply solutions are available in different configurations so that labels can be applied on top, on the front or on the side of a product.

Ovotrack Task Scheduler

The Ovotrack Task Scheduler can be used to automatically generate reports on a daily or weekly basis and to have these reports printed and/or sent by email. This can be useful for example to get an automatic email with yesterday's breaking results or the actual inventory of eggs.

Benefits

- Accurate labelling solution for labelling of finished goods in compliance with customer requirements
- Traceability from batches of processing eggs to tanks, pallets, cases, sales orders and bills of lading
- Real-time and accurate inventory of finished products

Global market leader in traceability systems for the egg industry.

To date, more than 100 Ovotrack solutions have been successfully implemented at egg grading and processing centers in Europe, Africa, North America and Asia-Pacific. Would you like to know more about our integrated solutions and the benefits they can deliver for your operations? Want to discuss your own requirements or challenges, or find out how we can help you?
